

Global Crop Analyst

GEOSYS:

GEOSYS is a world leader in supporting agricultural businesses with decision support tools that make use of the latest research in agronomics, information technologies and in particular remote sensing. Decision support tools range from worldwide risk management and supply monitoring of Ag commodities to field operations decision support to help make precision farming decisions. GEOSYS also develops customized business solutions dedicated to international agricultural companies.

To access to customers, globally, GEOSYS has sales and marketing in North America (Plymouth, MN, USA), Europe (Lausanne, Switzerland, and Krasnodar, Russia), Australia (Melbourne) and Brazil (Campinas, SP). Technical teams are mainly in Toulouse, France.

GEOSYS joined the Land O'Lakes group in 2013, which gives unique opportunity to be leveraged in North America and other markets.

GEOSYS has ambitious growth plan to be realized within the next 3 years globally.

Main Job Tasks and Responsibilities:

As the Global Crop Analyst, she / he will be accountable for quantitative yield trend update provided to our customers located in various regions of the world. She / he will also be responsible of providing professional mentoring to our clients when using our crop monitoring solutions.

- Validate the customers data consistency that feed the model
- Check the output of the model before it is delivered to our clients
- Deliver comments to our customers by analyzing their local and regional agro-climatic context
- Advise multiple clients based on the interpretation of the Agriquest™ global monitoring data by hosting regularly scheduled on-line appointments during the crop season
- Share feedback and expertise on the model with R&I team for continuous improvement
- Actively interact with Product managers to participate in the improvement of the existing products and services
- Be accountable for GEOSYS yield database, at different scales and for different countries, and coming from various sources

Education and Experience:

- Proven experience in analyzing crop conditions, preferably for commodity trading companies or crop insurance companies
- Outstanding interpersonal communication skills, both oral and written, as this position is working across geographical and cultural areas and with both internal and external stakeholders
- Strong analytical skills and knowledge in statistics
- Positive attitude and team spirit
- French or Russian speaking a plus
- Master's Degree in agronomy or crop science

Conditions:

Based in Plymouth, Minnesota
